

# Innovative Learning at Scale

Enabling Flexible, Hybrid Learning in a Modern Vertical Campus

Industry: **Education**

Location: **Adelaide, South Australia**

Flinders University aimed to create a flexible, technology-enabled learning environment that supports both in-room and remote students. The goal was to enable collaborative, student-focused teaching while ensuring lecturers could easily use any space. The solution also needed to integrate with existing systems, deliver a consistent experience, and provide a future-ready platform that can adapt as teaching evolves.

## WHAT WE DELIVERED

- Over 70 hybrid and remote collaboration spaces across eight levels
- Systems programmed and designed to be simple, intuitive, and uniform for easy use by lecturers
- Room booking panels that sync with the university's timetabling software for availability
- Future-proofed design – capable of virtual monitoring and remote access.

## IMPACT

Flinders University's Festival Plaza Campus offers inclusive, hands-on education for in-person and online students with AV solutions that ensure a seamless experience, positioning the university as a leader in innovative education and research. Its success has since established it as the foundation of Flinders' AV programming framework, now being deployed across their spaces nationally.
