

# Executive Collaboration, Evolved

## Enhancing Hybrid Executive Collaboration Without Operational Disruption

Client: **Multinational Mining Company**

Industry: **Mining**

Location: **London, England, UK**

A multinational mining company's UK office boardroom helps enable executive communications and decision-making across a distributed organization. While the space already featured collaboration technology, the existing configuration limited visibility in a long boardroom setting, particularly for remote participants. Building on a long-standing global partnership with Diversified, the company sought to improve visibility and engagement in hybrid meetings without completely replacing its existing technology investment.

### WHAT WE DELIVERED

- Expanded camera coverage to ensure all participants are clearly visible
- Enhanced hybrid meeting experience using intelligent framing features
- Seamless integration with existing collaboration technology
- Coordinated installation aligned to room utilization needs
- Ongoing collaboration support through Diversified's global services relationship

### IMPACT

The upgraded boardroom enables more effective hybrid collaboration for the company's executive team. Improved visibility and speaker framing help remote participants feel more connected, designed to enable stronger engagement and more productive discussions. Supported through an established global partnership, the solution supports confident collaboration across regions.
